

PRODUCT MACHINERY SPOTLIGHT: WEXXAR WF CASE FORMER

Wexxar's WF Case Formers have been an extremely successful solution to the automatic case erecting problem. With premium construction materials, and inline design and patented "Pin & Dome" technology, WF case formers are unmatched in reliability and durability. Let's take a closer look at the machine to see how each section adds to the equation.

Controls

Simple and intuitive user interface for easy machine operation

Built-in features like Machine Set Up, Machine Tuning & Troubleshooting

Quick and easy troubleshooting with on screen alarms displaying photos and inputs of the fault location

Quick size changes with on machine pictorial guides and color coded change handles

Magazine Section

Solid square upright transfer to forming section with dual independent belt drives and top case arm

Adapts for potential case skewing by detecting variations in back pressure and adjusting the belts

Large capacity holding up to 300 cases and even more with options

Sealing

Independently adjustable side belt drives to ensure a good tight seal of the case

Flexibility in sealant with hot melt or tape sealing

Premium adhesives especially for tape sealing with DEKKA tape heads

Easy tape roll replacement or maintenance with tilt-out taping when ordered with the standard DEKKA taping head

Forming Section

Reliable first case separation with injector plate. This is the number one jam point in most case erectors.

Patented Pin & Dome is the most reliable case opening and case control technology

Dynamic flap folding of the major and minor flaps ensures a nice clean and square case
